The KP Series of KP13S Standard Light Duty Linear Position Sensors are designed to withstand the harsh environments within motorsport and automotive testing applications. By using a proven conductive plastic, track technology and multi-fingered contacts, the KP13S offers high performance and reliability under extreme temperature and vibration.

With standard measurement ranges from 25mm to 250mm, the Stainless Steel Shaft is fitted with sealing to IP65 (our standard option), however we also offer an IP67 option which helps protect against the harshest conditions.

Cable exit can be manufactured to have to be either Forward or Reverse exit. Also, a Carbon Sleeve option is also available to protect the shaft against debris and other damage.

For critical applications where redundancy is required, we can also offer a Dual Output Sensor within the same package size.

KA Sensors adopts a continuous development program which sometimes necessitates specification changes without notice.
The KA configuration tool is used to specify a standard KA Sensor, other options are available.

**MECHANICAL DETAILS**

**Seal Rating**
- IP65
- IP67

**Cable Exit**
- Forward
- Reverse

**Dual Output**
- No
- Yes

**Spring Return**
- Yes
- No

**Flange Mount**
- Yes
- No

**Special Code**
- Carbon Fibre Sleeve

**Output signal may be reversed by swapping connections to the Red and Black wires.**

**DO NOT** connect +Ve Supply to the Yellow wire as this will cause damage to the sensor element.
