

The Motorsport Sensor Manufacturer and Specialist

** Spotlight on Linear Position Sensors **

The **KP** series of Linear Position Sensors are specifically designed to withstand the harsh motorsport environment. They are all manufactured with quality stainless steel shafts sealed to IP65 as standard. Cable exit can be chosen as forward or reverse and a carbon sleeve is available to protect the shaft from damage

The **KP94P** is a range of **Miniature** linear position sensors featuring a body size of just 9.4mm.

Length ranges are from 12.5mm to 175mm and the sensors feature industry standard bearing mounting options or quick release pop joints.

They can be easily integrated into existing or new applications.

The **KP13C** range are Compact Light Duty linear position sensors. The body size is just 13mm.

Length ranges are from 25mm to 175mm.

For critical applications where redundancy is required we can also offer a dual output sensor within the same package

The **KP15S** is our range of **Medium Duty** linear position sensors.

These products have a length range of 100—250mm with a square profile body size of 15mm.

The proven conductive plastic track technology and multi fingered contacts.
